Pulper screen PSC

Pulper screen PSC

The **ST Macchine** Pulper Screen is a system engineered for the cleaning of the High Density Pulpers in a batch mode; by this system the removal of contaminants is easier because the contraries are immediately removed at the beginning of the waste paper process.

Because of the principle of fiber to fiber action got in the HD Pulper the Pulper screen removes plastic contaminants in large pieces without any cutting action and loss of good fibers.

Different holes perforation available for the perforated plate (from 4 mm to 12 mm)

Model	PSC10	PSC20	PSC30	PSC40	PSC50
Volume [m ³]	1	2	3	4	5
Pulper HD [m ³]	6-10	12-18	22-25	30-40	50-70
Installed power [kW]	37	55	75	90	132
Work consistency [%]	5%
